

CLAIMS

1. An inflatable curtain for protecting the occupants of an automobile,
comprising:
a peripheral region;
an inflatable portion;
a first stiffening element positioned along at least a portion of the peripheral
region, wherein during deployment of the inflatable curtain the first stiffening element
reduces the inflation time of the inflatable portion.

2. The inflatable curtain of claim 1, wherein the inflatable portion further
comprises an inflation inlet for communication with an inflator.

3. The inflatable curtain of claim 1, wherein the stiffening element is
substantially planar.

4. The inflatable curtain of claim 1, wherein the first stiffening element
remains substantially stationary with respect to the length of the inflatable curtain when
the inflatable portion is inflated.

5. The inflatable curtain of claim 1, further comprising a second stiffening
element positioned along at least a portion of the peripheral region.

6. The inflatable curtain of claim 1, wherein the first stiffening element has a length greater than its width, the inflatable curtain has a length greater than its width, and the length of the first stiffening element is oriented substantially parallel to the length of the inflatable curtain.

7. The inflatable curtain of claim 1, wherein the peripheral region comprises an upper part, and the first stiffening element is positioned along the upper part.

8. The inflatable curtain of claim 1, wherein the stiffening element is formed as an integral portion of the inflatable curtain.

9. The inflatable curtain of claim 1, wherein the stiffening element is securely fastened to the inflatable curtain.

10. The inflatable curtain of claim 9, wherein the stiffening element is a plastic stay.

11. The inflatable curtain of claim 9, wherein the first stiffening element is stitched to the peripheral region.

12. The inflatable curtain of claim 1, wherein the inflatable curtain is tetherless.

13. The inflatable curtain of claim 1, further comprising a tether.

14. The inflatable curtain of claim 1, wherein the peripheral region comprises
an upper part, and further comprising a connector located along the upper part to secure
5 the inflatable curtain to the automobile.

2025.01.04 10:03

15. An inflatable curtain for protecting the occupants of an automobile, comprising:

a peripheral region;

an inflatable portion comprising an inflation inlet for communication with an inflator; and

a first substantially planar stiffening element positioned along at least a portion of the peripheral region, wherein the first stiffening element remains substantially stationary with respect to the length of the inflatable curtain when the inflatable portion is inflated, and wherein during deployment of the inflatable curtain the first stiffening element reduces the inflation time of the inflatable portion.

16. The inflatable curtain of claim 15, further comprising a second stiffening element positioned along at least a portion of the peripheral region.

17. The inflatable curtain of claim 15, wherein the first stiffening element has a length greater than its width, the inflatable curtain has a length greater than its width, and the length of the first stiffening element is oriented substantially parallel to the length of the inflatable curtain.

18. The inflatable curtain of claim 15, wherein the peripheral region comprises an upper part, and the first stiffening element is positioned along the upper part

19. The inflatable curtain of claim 15, wherein the stiffening element is formed as an integral portion of the inflatable curtain.

20. The inflatable curtain of claim 15, wherein the stiffening element is securely fastened to the inflatable curtain.

21. The inflatable curtain of claim 20, wherein the stiffening element is a plastic stay.

22. The inflatable curtain of claim 20, wherein the first stiffening element is stitched to the peripheral region.

23. The inflatable curtain of claim 15, wherein the inflatable curtain is tetherless.

24. The inflatable curtain of claim 15, further comprising a tether.

25. The inflatable curtain of claim 15, wherein the peripheral region comprises an upper part, and further comprising a connector located along the upper part to secure the inflatable curtain to the automobile.

26. An inflatable curtain for protecting the occupants of an automobile, the inflatable curtain comprising:

a length and a width, the length being greater than the width;

a peripheral region having an upper part;

an inflatable portion comprising an inflation inlet for communication with an inflator;

a connector located on the upper part to secure the inflatable curtain to the automobile; and

a first substantially planar stiffening element having a length greater than its width, the first stiffening element being positioned along at least a portion of the upper part, wherein the length of the first stiffening element is oriented substantially parallel to the length of the inflatable curtain, wherein the first stiffening element remains substantially stationary with respect to the length of the inflatable curtain when the inflatable portion is inflated, and wherein the first stiffening element reduces the inflation time of the inflatable portion.

27. The inflatable curtain of claim 26, further comprising a second stiffening element positioned along at least a portion of the peripheral region.

28. The inflatable curtain of claim 26, wherein the stiffening element is formed as an integral portion of the inflatable curtain.

29. The inflatable curtain of claim 26, wherein the stiffening element is securely fastened to the inflatable curtain.

30. The inflatable curtain of claim 29, wherein the stiffening element is a plastic stay.

31. The inflatable curtain of claim 29, wherein the first stiffening element is stitched to the peripheral region.

32. The inflatable curtain of claim 26, wherein the inflatable curtain is tetherless.

33. The inflatable curtain of claim 26, further comprising a tether.
